ジージョくん

Prepare for an earthquake!

Flow of evacuation in case of an earthquake

Explanation of evacuation sites, evacuation centers, evacuation facilities, etc.

● Temporary evacuation area

It is a familiar place where disaster prevention city resident organizations (town councils and neighborhood associations) can temporarily gather to check on each other and evacuate as a group. Make sure in advance where you will first run to in the event of an earthquake.

● Safety Evacuation area

It is an open space to evacuate temporarily at the time of an earthquake to protect yourself from the danger of the spread of fire. When there is a danger of fire, you need to evacuate to a nearby park, etc., but if there is a risk of fire spreading, make an early decision to escape to a wide-area evacuation site.

● Designated remaining area within the district

The area has been designed to be noncombustible, and there is no need to evacuate to a safety evacuation area.

● Evacuation road

These are roads designated by the Tokyo Metropolitan Government for the safe evacuation of people from areas where long-distance evacuation (more than 3 km) to wide-area evacuation sites is necessary in the event of an earthquake, or from areas where there is a significant risk of fire spread.

● Evacuation shelter for ward residents

It is a place to live temporarily when it is difficult to live at home due to collapsed houses, spread of fire, etc. The City decides to open the facility, and the evacuation center management committee will manage it. Facilities such as municipal schools are designated by each area. Check in advance which facilities you should go to. If the capacity is insufficient, a supplementary evacuation center will be established.

● Welfare evacuation shelter

The facility accepts pre-designated evacuees who have difficulty living with other evacuees in an evacuation center for city residents and who require support for evacuation activities.

● Tsunami evacuation facilities

A robust building made of reinforced concrete, etc., where local residents evacuate when a "tsunami warning" or "major tsunami warning" is announced. If you don't have time to evacuate to a high altitude place or tsunami evacuation facility, evacuate to the second floor or higher of the building.

Prepare for landslide disasters during wind and flood damage!

● Know the risk of landslide disasters

There are "landslide disaster warning area" and "landslide disaster special warning area" in the area where the damage of landslide disaster is expected. Both areas require caution, but the "landslide disaster special warning area" is a more dangerous area.

Sediment disaster warning area

Areas where there is a risk of endangering the lives or bodies of residents, etc.

Sediment disaster special warning area

Areas where there is a risk of damage to buildings and serious harm to the lives or bodies of residents, etc.

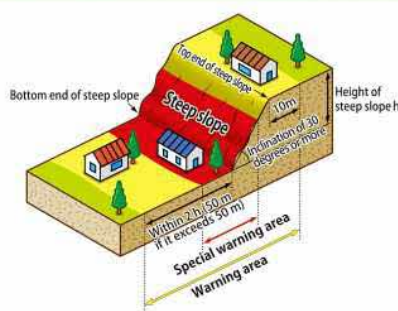

Landslide disaster warning information

While a heavy rain warning has been announced, this is jointly announced by the Japan Meteorological Agency and the Tokyo Metropolitan Government when there is an increased risk of a landslide disaster due to rainfall. This is a guideline for people living in areas where there is a risk of landslides to begin evacuation.

● When there is a risk of landslide disaster

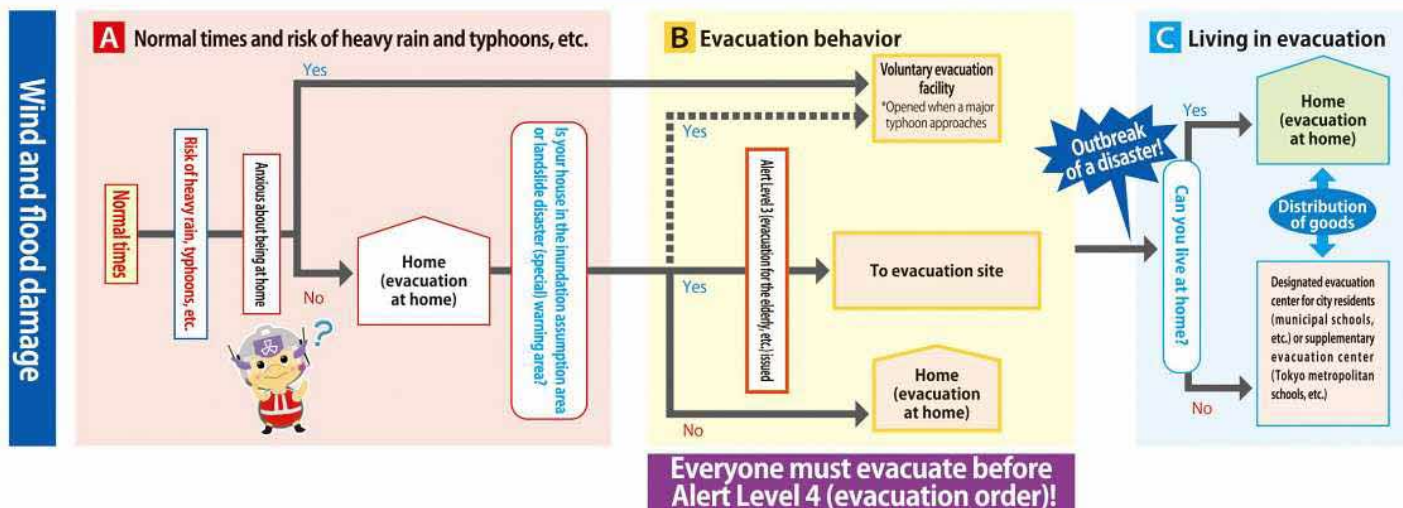

Landslide disaster warning information can be checked on TV and the Japan Meteorological Agency website. In addition to making a decision on voluntary evacuation, evacuate to a safe place when evacuation information, etc. is announced or issued by the City.

Identify areas at risk of landslide disasters and confirm routes to evacuation sites in case of emergency.

Prepare for wind and flood damage!

Flow of evacuation in case of wind and flood damage

Evacuation information and actions in case of wind and flood damage

Evacuation information is generally announced and issued as shown in the table below. Evacuation information is not always issued in this order. In addition, even if this information is not yet issued, if you feel it is dangerous, check the opening of evacuation centers, move to a Voluntary evacuation facility or evacuation area. If moving to an evacuation area poses a danger, evacuate to a safe place nearby or secure your safety inside a building.

Alert Level	Evacuation information, etc.	Action to be taken
Alert Level 5  Disaster occurrence/ Disaster impending	Emergency safety Measures	A disaster has occurred or is imminent. Take immediate action to protect your life, such as emergency evacuation indoors (vertical evacuation, etc.).
~~~~~ (Be sure to evacuate by Alert Level 4!) ~~~~~		
<b>Alert Level 4</b> Evacuation of all residents  High risk of disaster	Evacuation Instruction	All persons should begin evacuating immediately to areas that will not be inundated.
<b>Alert Level 3</b> Evacuation of the elderly, etc.  Risk of disaster	Evacuation of the Elderly, Etc.	Elderly persons, etc. who need time to evacuate will begin evacuation. All others should prepare to evacuate.
<b>Alert Level 2</b>  Weather worsening	Advisory	Check the hazard map to confirm evacuation actions in case of a disaster.
<b>Alert Level 1</b>  Risk of weather worsening	Early advisory information (possibility of alarm level)	Increase preparedness for disasters by watching weather forecasts, etc.

*Quoted from the Cabinet Office (in charge of fire fighting) and the Fire and Disaster Management Agency

## Explanation of evacuation facilities and evacuation sites

### ● Voluntary evacuation facility

It is a facility for people who feel anxious about staying at home when a typhoon that causes damage to the City hits directly. According to the scale of the typhoon, etc., the City decides whether or not and when to open.

### ● Evacuation area

It is a place to receive evacuees temporarily to avoid danger when evacuation information, etc. is issued. Municipal schools are designated in advance, and the City decides to open in accordance with the announcement of evacuation information.

Evacuation areas are decided for each disaster of Meguro River flood, storm surge, Tama river flood, and landslide disaster.

1 : 24,000

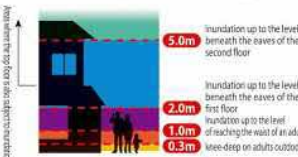

Setagaya City

N

Estimated area: Tachibana River (part of Higashi-01-2 and Minami-01-1-chome)

Estimated inundation depth (rank classification) and guidelines

## Legend (tsunami)

Maximum inundation depth

- Areas of 1.0 m or more to less than 2.0 m
- Areas of 0.3 m or more to less than 1.0 m
- Less than 0.3 m

People living on the first floor of the colored area need to evacuate.

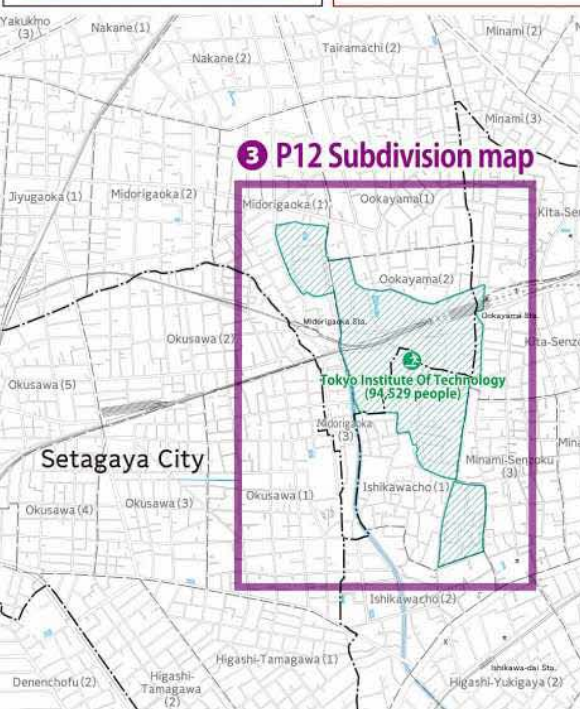

## List of City Facilities with Automated External Defibrillators (AED)

AEDs are available at facilities in the city, such as government offices, health care centers, community centers, libraries, and elementary and junior high schools. For a list of AED-available facilities, see the city website.

Evacuation area (landslide)

Estimated inundation depth (rank classification) and guidelines

## Legend (inundation)

Inundation assumed area (inundation depth)

Areas of 5.0 m or more to less than 10.0 m

Areas of 3.0 m or more to less than 5.0 m

Areas of 1.0 m or more to less than 3.0 m

Areas of 0.5 m or more to less than 1.0 m

Areas of 0.1 m or more to less than 0.5 m

Inundation zone in case of river flooding

Meguro River

Tachiai River, Uchikawa River, and Nomigawa River

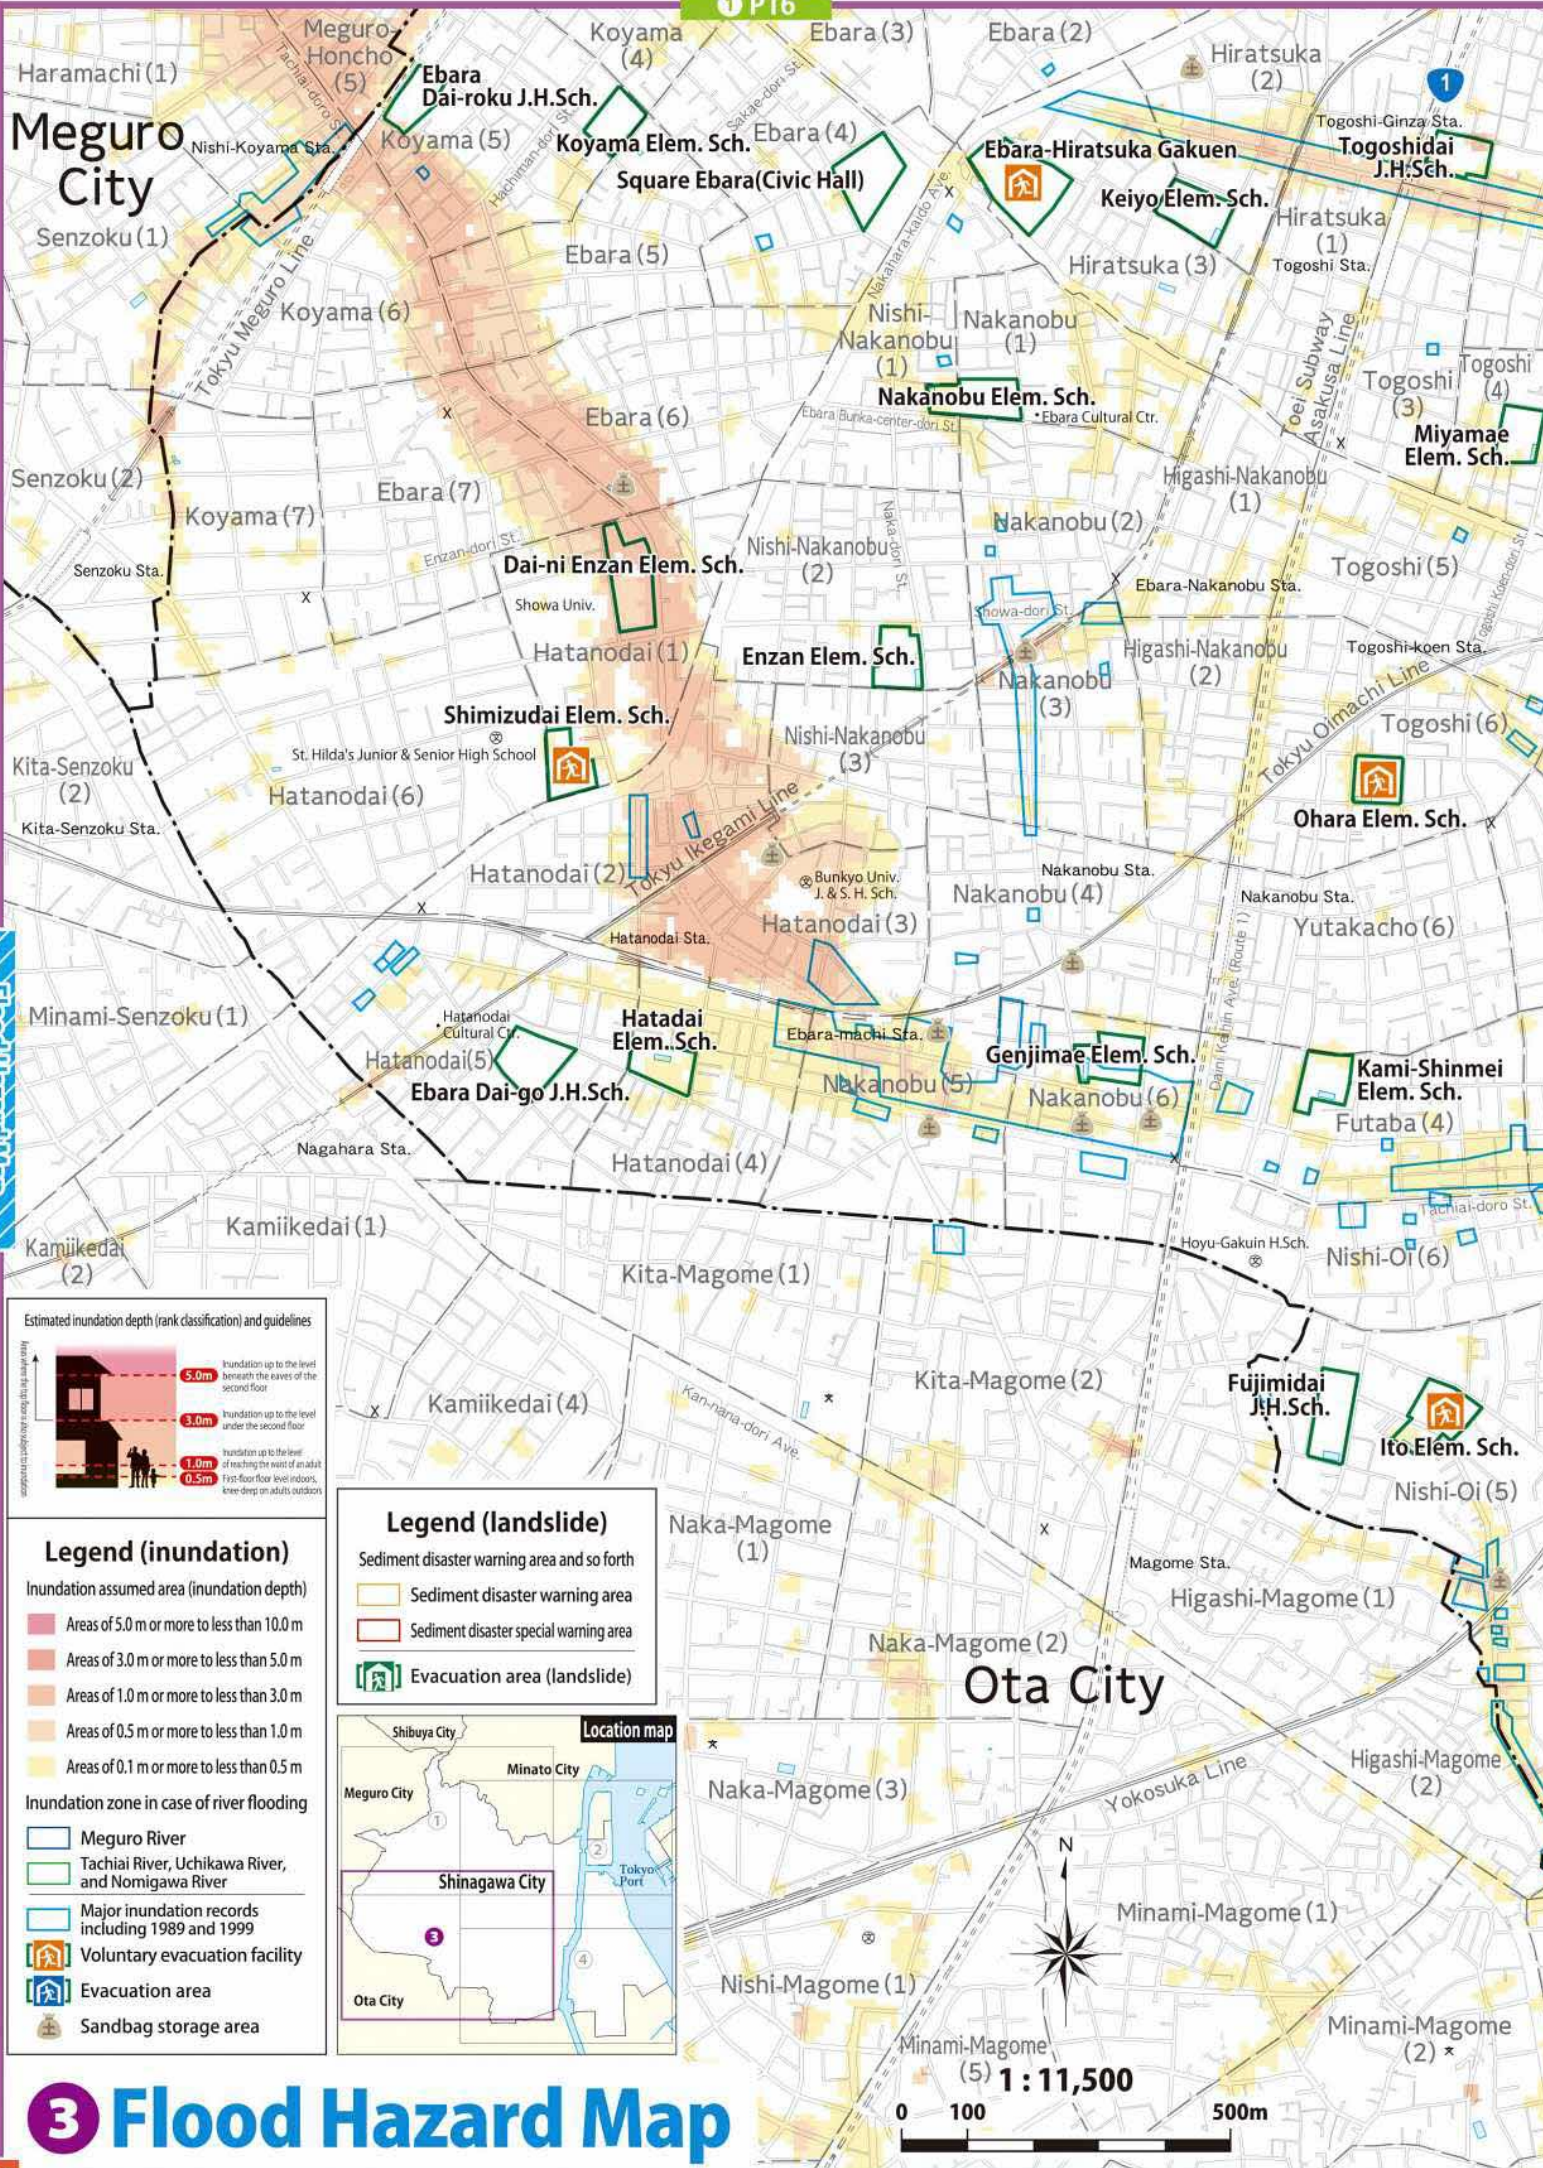

Major inundation records including 1989 and 1999

Voluntary evacuation facility

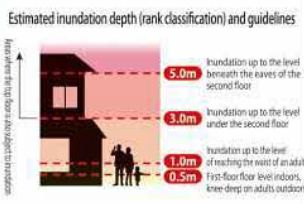

Evacuation area

Sandbag storage area

Flood Hazard Map

## ■ What is Tokyo My Timeline?

- Rain and wind can be predicted in advance, so you can prepare before wind and flood damage occurs.
- My Timeline is a pre-determined set of actions for each person to take in preparation for wind and flood damage.
- Create your own My Timeline, individually, as a family, and as a community.
- Protect yourself from wind and flood damage by preparing well through the creation of My Timeline.

## ■ When do you use My Timeline?

### When a typhoon is approaching

When it is reported in the news that there is a possibility of a typhoon hitting directly in 3 to 5 days, there is a possibility of river flooding, landslide disaster, and storm surge.

### When heavy rain lasts for a long time

When the weather forecast says that heavy rain will continue for 2 to 3 days, there is a possibility of river flooding and landslide disasters.

### When rapid and heavy rainfall occurs in a short period of time

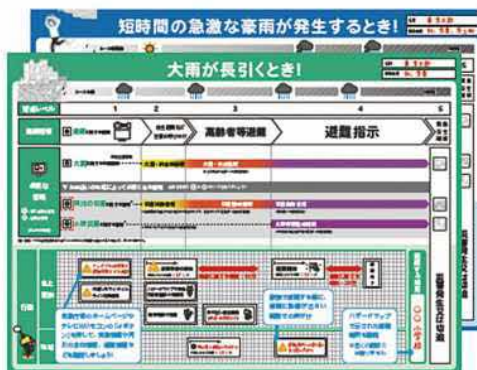

When the weather forecast warns that there is a possibility of sudden heavy rain or heavy rain with thunder in the evening, it is possible that river flooding and landslide disasters may occur.

### My Timeline Sheet

There are three types: typhoon, heavy rain, and sudden heavy rainfall.

### Example of My Timeline Creation

This is an example of how to create My Timeline.

Please read the two-dimensional code for creating My Timeline, etc.

## Tips for evacuation

### ● Pay attention to the evacuation call and collect accurate information

When danger is approaching, the City or fire department may call for evacuation. If there is a call, evacuate immediately.

### ● Please cooperate in evacuating those who need consideration

There are people such as the elderly, the disabled, infants, and foreigners who need to pay attention to disasters. Be considerate and supportive.

### ● Equip with emergency supplies

Be prepared in advance so that when you evacuate, you can quickly take out the minimum necessary items.

## Daily preparedness

In an emergency, you may not be able to get necessary things such as food at the time of evacuation. You should prepare necessary items on a daily basis so that you can take them with you when you evacuate.

### 【Examples of emergency items】

#### ■ Items that inform health conditions

- ☐ Helpmark/Helpcard
- ☐ Certificate of disability
- ☐ Medicine notebook

To receive assistance

#### ■ Valuables, etc.

- ☐ Cash (including coins)
- ☐ Bankbook and seal
- ☐ House key
- ☐ Identification card (e.g. driver's license)
- ☐ Health insurance card
- ☐ A list of emergency contact information
- ☐ Cellular phones, smartphones, and battery chargers

#### ■ Hygiene products

- ☐ Household medicines and medicines for everyday use
- ☐ Masks
- ☐ Wet wipes
- ☐ Towels
- ☐ Toothbrush
- ☐ Glasses and contact lenses (contact lens cleaning solution)
- ☐ Portable toilet
- ☐ Toilet paper
- ☐ First-aid kit

Read the disaster prevention handbook! You can see by scanning the QR code.

#### ■ Convenience goods

- ☐ Flashlight
- ☐ Whistle and buzzer
- ☐ Helmet
- ☐ Working gloves
- ☐ Writing materials and notes
- ☐ Packing tape
- ☐ Plastic bag
- ☐ Slippers
- ☐ Portable radio

#### ■ Food

- ☐ Emergency food
- ☐ Drinking water

Prepare your own foods, including allergy-friendly meals.

#### ■ What you need (hearing aids, white canes, dentures, etc.)

- ☐
- ☐
- ☐
- ☐

Fill out what you need to know.

## Disaster prevention memo for my family

Write and keep a disaster prevention memo of the decisions you have made with your family in case of a disaster. One way to do this is to take a picture of your emergency memo with your cellular phone or smartphone camera. Also, Shinagawa Disaster Prevention Pocket Card can be used to confirm necessary information such as the evacuation process. Carry it in your wallet on a daily basis for convenience in times of disaster.

### ● Evacuation center

Evacuation center	Fire station <b>119</b>	Police <b>110</b>	NTT Disaster Message Dial <b>171</b>
-------------------	-------------------------	-------------------	--------------------------------------

### ● Emergency contact information for family members and acquaintances

Name	Name of contact (company, school, etc.)	Phone number	Safety confirmation method	Meeting place

Shinagawa Disaster Prevention Pocket Cards are distributed at the Disaster Prevention Section of Shinagawa City and the nearby regional center.

## Information gathering

At the time of a disaster, inaccurate rumors and unfounded information may flow. Ensure that you have up-to-date and correct information on the status of the disaster and the opening of evacuation centers and evacuation areas from reliable sources.

### Shinagawa City Website

<https://www.city.shinagawa.tokyo.jp/>

You can see the weather information of Shinagawa City, water level information of the Meguro and Tachiai Rivers, and images of river monitoring cameras.

### Shina Mail (Shinagawa Information Mail)

Registration is required in advance.

You can select the information you want to receive from the notice from the City, emergency information, disaster prevention weather information, etc.

### Shinagawa City Twitter @shinagawacity

It is useful to follow it on Twitter.

Earthquake information and weather warnings issued by the Japan Meteorological Agency are also automatically delivered.

### Shinagawa City Official LINE @shinagawa_city

To use this service, you need to add it as a friend on Line.

The contents of broadcasts from the Disaster Prevention and Administrative Radio are distributed by text.

### Cable TV Shinagawa

The Shinagawa City Resident Channel (terrestrial digital broadcasting channel 11) displays weather information and other information in text on the regular broadcast screen.

#### ● L-shaped broadcast

Displays weather information such as warnings and water level information of the Meguro and Tachiai Rivers

#### ● Shinagawa TV-Push

A service that delivers emergency information by automatically switching channels or turning on the TV (paid service)

### Yahoo! Disaster Prevention Alert

To use this service, regional setting is required in Shinagawa City, Tokyo

Shinagawa City distributes disaster prevention information and emergency information using the Yahoo! Disaster Prevention Alert.

### FM radio

FM Shinagawa (88.9 MHz) provides information from the City and Disaster Prevention Administrative Radio.

### Emergency only

#### Disaster prevention administrative radio confirmation dial

If you call 0120-562-311, you can listen to the content of the disaster prevention administrative radio broadcast within 24 hours.

#### Emergency notification call for evacuation information

It is a service that the City sends information about evacuation by phone or e-mail to people in the area where there is a risk of tsunami, inundation damage, and landslide disaster.

#### Public relations vehicle

The vehicle will go to the area where danger is predicted, and communicate information by calling from loudspeakers.
